

Dirty Energy News

Volume 1. the Dirty Energy Newsletter. From the energy experts at www.USH2.com & KnowledgePublications.com The best energy knowledge you've never ever heard of before.

the Dirty Energy Newsletter is NOT what you think it is

I started one of the best publishing companies that only publishes books on Energy. Mostly on Solar, hydrogen, fuel cell, biomass, wood, alcohol, methanol etc... These are what people could call 'alternative' or 'renewable energy'. However I refuse to use these words. NO WHERE on my sites will you see the words: pollution, dirty, clean, renewable, alternative, sustainable, global warming,

climate change or any thing to do with negative promotion. Let alone the hate promotion of the enviros. NO ONE wants something that is alternative. Everyone wants something that is the best, the fastest, cheapest, easiest, most powerful. Nothing alternative become mainstream. Only the best becomes dominate. With all of the oil, energy and car companies playing pussy with TV ads

(except consol energy) I wanted to name this the American Energy Newsletter. I love to wave the flag. However after long consideration and saying "I've had it." The irony of calling the newsletter "Dirty Energy" was not lost on me. This newsletter will be written in common daily English. How people, including me, speak and I'm known for NOT holding back. Dirty Energy is born.

The Straw that broke the camels back. Let it begin.

Dirty Energy Newsletter Volume 1.

I've had it. I'm SICK and TIRED of stupidity, junk science and the worthless damn know-nothing, incompetent politicians, but I repeat myself.

The Midwest Renewable Energy Association Fair (MREA) was a huge wake up call for me. Actually, it was not a wake up call so much as the straw that broke the camel's back! I knew it but had not seen it with my own eyes. The entire field of solar, hydrogen, fuel cells, natural gas, methane, biogas etc... has been swarmed and co-opted by the counter culture, long haired hippy freak environmental wackos who have nothing but revulsion and loathing for everything that man has done and accomplished. They have a profound hate of man, the United States of America

and anything that has to do with industrial excellence and miraculous technologies that we have today. These effeminate flute playing pansies have NO knowledge of science, chemistry nor history. They only promote and advocate what could be, while bitching, moaning and protesting when our industrial sector uses world class mass manufacturing to make viable technologies cost effective realities. Then they pass, or try to pass, laws that effectively castrate the entire economy or the technology.

So, I'm doing to be the new dictionary definition of Dirty Energy. You all wrote me and said, "Steve.. start social networking, start a blog, start twitter, use face book... come on out and lets hear what you have to say." Fine, I'm here. You want it, you're gonna get it. I've not only had a passion for the

entire spectrum of history but I especially have a love of military history. One of my favorites of history is General George S. Patton. Patton talked to his men in the language they spoke. He gave it to them dirty and straight so it'd stick. I'm not going to hold back my language and I'm not going to be nice. I cuss and I swear and I actually call idiots what they are and I do it to their face. I sent hho water fuel idiots away from my booth at MREA in tears and screaming like a pig stuck in a fence while 30 other people around the booth where applauding and clapping for someone standing up for real science.

Lead, follow or get the hell out of the way and if you're going away keep your lips SHUT because I don't want to hear you whining as you leave. If you follow this newsletter you're gonna get the

best stuff you never knew about energy from me and you're going to get it dirty and straight. Maybe it'll stick in minds of mush that have been polluted with the endless tide of crap peddled by babbling TV idiots. This is the start of the Dirty Energy Newsletter by Steven Harris of www.USH2.com

So what's got me to this point? What is some of the points of key frustration (other than the blithering pagan earth worshipping idiots). Well I'll tell you how we got here and you'll be amazed.

My dear friend and mentor Roy McAlister has been working in the field of hydrogen and energy since the early 1960's. If there is a man on this planet who should win about three Nobel prizes for his work, it's Roy McAlister. It's one of my life's ambitions to make sure he wins at least one and I don't mean an 'al gore' Nobel prize either. What an insult. The Nobel reduced to the level of an Oscar and the Oscar reduced to the level of a Boy Scout merit badge for writing fiction. Roy has worked in the field for 50 years. I've immersed my life in the field of science, chemistry, electronics and much more since the early 1980s. Roy and myself both have entire notebooks locked away and filled with possibilities for more great energy stuff that would blow your mind than what popular science could ever dream about publishing in 100 years (we don't think much of the fantasy oriented technology porn that pop sci has published in the last 20 years).

A friggin idiot senator from someplace where the people

are dumb enough to elect him (over and over), is on the TV Saying, "Solar energy is great but until there is a technology breakthrough, its no good right now." Senator Idiot could not find his ass with both hands if he was naked in a whore house full of mirrors, and I bet he's been there. At USH2.com I published a book from 1903 titled Solar Heat which shows solar energy running a printing press that published a paper for years. The Paper was called "The Sunshine Press." Current 'solar power', also known as solar photovoltaic (PV), is the worst thing that ever happened to the solar industry. It's a red herring, a distraction. We had MUCH better solar photons to electrons efficiencies before solar PV polluted the field. Yeah, pre-1970 solar energy, like the Sunshine Press was better than 1970's, 80's, 90's, 2000's solar electric PV panels.

On the subject of Senator Idiot's falsehood about a technology breakthrough needed for storing solar energy (or wind energy), I have a book in my personal library from 1906. On three pages it gives you the complete chemistry for the storage of solar energy. You can capture solar energy, put it in a truck or train and haul it to where you want and make automotive fuel or electricity as you desire on demand. No electric power lines needed at the solar or wind field. It's pre-WWI chemistry. When you understand chemistry and science rather than have contempt for it, you understand that the 'technology breakthrough' for solar is NOT in the future, its over 100 years in our past. We have the technology and the

ability to use it NOW. All that is needed is the determination, fortitude to manage it. I mean 1981 Bill Gates Microsoft licensing DOS to IBM type of tentacular fortitude and not a company run by a committee of lawyers, bean counters and politically correct social pansies.

Ok, Great. Roy and Steve have the technology and the chemistry proved. Why don't we make it? The technology is the easy part. The hard part is the dollars it takes to make it on a scale that works and then dealing with the herd of idiots that comes along with it. I got so tired of the financial idiots, the venture capitalists, the angel investors (over a period of 10 years) that I told them all to go to hell. It was a parade of crooks, fools self serving SOB's and politicians (but I repeat myself) just trying to use us.

The 'edge of technology' in the field is not something easy to do. However there is a lot of stuff that works that is easy to do. I had a lot of friends, associates and others who emailed me that wanted to know how to do things like solar heat, solar cooling, biomass gasification etc... I have great books on all of these subjects in my personal library. The stuff that works, that is easy to do and the stuff that you can do today with what you have around you today. So I started a publishing company to publish the great hands on stuff that really works. The idea is called "Self Funding." I wanted to start a company that made the money that Roy and I needed to make more technology and to produce more energy. Then we take that tech-

nology and sell and market it to our customer base to make more revenue that we use to make solar energy fields that cover hundreds of square miles. I mean real solar energy fields, NOT worthless damn sucker solar PV panels.

So we had a plan and a mission and five years, 70+ books and DVDs and 60,000+ customers later we're moving forward very well and have one of the best publishing businesses in the field of energy-you-can-do. Then November of 2008 came and so did the Great Depression of the 21st Century. Sales fell off a cliff. We were checking our website, our shopping cart, our merchant account and everything to make sure it was all working. It was like someone took the 'sales switch' and turned it off. Sales did not completely stop. We still have enough sales to keep the doors open and to keep the business open but the forward progress for us to self fund ourselves to make a 100 square miles of solar power has stopped for the moment. (Wait till I tell you the story of trying to contact T. Boone Pickens!)

Plus, now we have a socialist mindset elected and political cesspool called "cap and trade" and other problems. Do you think cap and trade will help the fields of solar, hydrogen, fuel cells, biomass and the rest? Well if you do, you're wrong. CO2 limitations will gut and disembowel the entire field of solar and hydrogen. You just might as well turn the clock back to the 1970's. If you want to know why, look for it in a future Dirty Energy Newsletter. Like I said, I'm going

to give you the best stuff you never knew about energy and I'm going to give it to you with both barrels right in the face. I'm going to give it to you dirty and straight. Maybe you'll remember it.

So, the forward movement of Roy and Steve and the USA independent solar energy has slowed way down for the moment. One of the things I can do right now is talk and educate. So talk and educate I am going to do. Either the Lord has given me the intelligence, determination and fortitude to start my life's work, or he has not. We will move it forward. If you're all excited and giddy and think you might want to 'invest' in Roy and Steve financially and help us move forward— Don't. We won't take it. There are only two cooks in our kitchen and that's us. Last thing I need is a committee and have to break out my Dale Carnegie book (yes, I had the class, many times). Do you desire to support us? Then buy our books and DVDs and webinars that we have at www.USH2.com www.USH2edu.com and www.KnowledgePublications.com. What got us here? What got Roy and Steve here? You did. Our customers. You got us here one book and DVD at a time. We rode here on your shoulders. I'm not going to give up on the project and I'm certainly not going to give up on you. If you forward this newsletter to a few friends, that helps. If you blog about us, that helps. If you send this newsletter to your elected official, and ask him/her if they are the idiot I'm talking about in this newsletter, that helps. The solar energy garden of Roy and Steve's needs water. A dam burst of water is not needed.

A flood of water is not needed. A thunderstorm or a hurricane of water is not needed. What makes a good project or garden grow is steady gentle rain and a lot of sunshine. Your support and communications is our sunshine and your patronage of our books and DVDs are the gentle rain drops. One by one they water our fields. That sounds poetic. Maybe I can find a flute player to add music to the poem.

As always, all of my best to you: our customers, our friends and especially to our new customers and friends. What about our enemies or the people who might of been offended by Dirty Energy you ask? I don't give a damn.

Lead, Follow or get the F out of the way. [I'm trying not to be TOO dirty]

Steven Harris
CEO KnowledgePublications.com
Publisher / Editor of the Dirty Energy Newsletter.

We send these out as a .pdf so you can forward it.

Want to be the FIRST to get the Dirty Energy Newsletter? I publish it every time I get a chance to write, or something really stupid is in the news or I get really pissed. :)

Send an email to dirtyme@knowledgepublications.com

You'll get a confirmation email that you must click an OK or something inside of it, and then you'll get another confirmation, and then you're ALL OURS for abuse !! p.s. We're the only one who emails you, NO ONE else. You're OURS, so we don't rent, lease or sell your info.

Stuff we like, Resources for You, & Hands on Stuff We Sell

Carbonite has SAVED MY REAR END, my data on at least TWO occasions. I trust them, you can too. - Steven Harris

I have been using 1automationwiz for our KnowledgePublications.com shopping cart for many years. We like it, its grown, and if you are looking for a great cart, double click on the above graphic.

double click on image above for the link

We have carbonite on all of our main computers to backup our books and data and stuff we can't afford to loose. Carbonite backs stuff up in the background to the carbonite servers on the net. There IS NO GIG LIMIT and its encrypted and secure.

double click on image above for the link

Follow us on twitter, get the latest updates, see video and newsletters before others do. We get feedback on our stuff from our twitter folks before we release stuff.

double click on image above for the link

Follow us on youTUBE, and youtube will let you know when we add more great videos for you to see.

www.USH2.com

"I sell here, Sir, what all the world desires to have: *Power!*"

This is us. This is our website where we have our books and our DVDs that WE PUBLISH. We print them, we publish them, we distribute them. www.KnowledgePublications.com is our main and original website, but its a LONG name and not as easy to use in advertising and thus why I use www.USH2.com on different advertising. Its us, its the same thing.
